### SUPRA-SCIENCE DEPT:

**{Notes: these papers are being collected under the editorship of Dr. Thermal N. Thurman, Chair of the Department of Interplanetary Fictive Studies of the University of Nepal at Kathmandu. Dr. Thurman is assisted in this vital work by Dr. Steven Lopata (PhD. Exochronology), Fellow of the Cosmic Chemists Society and an Honors Graduate of Miskatonic University. Contributing to these discussions is Dr. Josef Fann, Proctor of Perigee Periphrasis at the University of Outer Mongolia, Ulan Bator. These papers will be available in an English language edition as well as Uргу and Sanskriti editions.}**

Dr. Thurman~~**The original text that sparked these investigations contained the following statements:** "... it meant to me that we would be rocketing to the far planets by 2000, we might even be fighting blazing interplanetary wars with Bug Eyed Monsters --- Monsters that had a fondness for scantily clad females of Earth, females who in turn had a fondness for wearing brass bras while on earth or in interplanetary flight." (and) "Scientific research has since established that Bug Eyed Monsters are indifferent to bras made of cloth."

**Dr. Lopata**~~ As far as BEMs chasing after well endowed, nubile, Earth females in brass brassiers, the Journal for Irreproducible Results has published, or will publish sometime an article that shows the female chasing aliens are actually hungry. But here's the switch, they're not interested in the females. Protein incompatibility and allergies make Earth females of massive indifference to Bug Eyed Monsters. What they actually want is the brass metal in those bras. You see, most BEM shave green blood and the copper in brass (a copper/zinc alloy) is vital for their continuing BEMish good health. Additionally, they've discovered that some of the salts perspired by fleeing females make good seasoning for the main meal.

**Dr. Fann**~~After thorough examinations in the field and rigorous testing in the laboratories the following conclusions have been concluded.

- (1) Bug Eyed Monsters have an aversion to bras made of cloth inasmuch as they are indigestible in the alien stomachs, that is to say the two stomachs found in juvenile aliens and the three stomachs found in adult aliens cannot digest cloth bras without suffering acute discomfort.
- (2) A different degree of discomfort was noted when the bras were made of cotton materials as opposed to polyester materials.
- (3) A geographical region known as Alabama grows and harvests unadulterated cotton suitable for bra manufacture whereas a geographical region known as Egypt grows and harvests an impure crop which, upon analysis, was shown to be a mixture of cotton and polyester materials.

It was determined that this mixture came about by the Egyptian custom of rotating crops, that is to say, the Egyptian farmers planted cotton one year and then planted polyester the following year in the same field. The contaminated soil then produced the impure crops that were discovered by our examiners.

(4) Consuming brass bras lined with cotton materials caused alien stomach cramps whereas consuming brass bras lined with polyester or a cotton-polyester mixture caused massive alien bellyaches. The aliens were rendered helpless in said condition.

**Dr. Thurman**~~These findings are of military significance and accordingly have been forwarded to the Pentagon, Washington, DC and called to the attention of the Joint Chiefs of Staff.

**FNNNews**~~The Bolivian government yesterday reported a sudden surge in orders for raw brass ore that has caused the price of the metal to increase two thousand percent. The major brass mines in the interior of the country are now working two twelve-hour shifts to meet the demand but the miners are said to be suffering as a result. Brass miners in Bolivia receive no rum breaks. The Minister of Mines and Oil Wells, speaking on condition of anonymity, told FNNNews that the unexpected demand for raw brass came from an anonymous source in Washington, DC

*SECRET WEAPON FOUND! FEAR ALIENS NO MORE!*

---

**Magic Moments in History Dept:** The meeting with pioneer publisher Hugo Gernsback, circa 1952. We met in the corridor of a Worldcon hotel. He nodded at me. I nodded at him and the nogled the young woman with him. We went our separate ways.

**Confucius Pong say:** When raygun hiss, tarry not to inspect error in grammar

**Reprint Dept:** "Lez-ettes" were an invention of the 1940s, probably because this not-so-humble editor had more time on his hands than common sense in his head. A Lez-ette was a tightly condensed story told in three chapters as follows:

Chapter 1: Vampire

Chapter 2: Mirror

Chapter 3: Long time no see

...would our literary readers care to contribute to this decadent art form?

**Magic Moments in History Dept:** The personal letter from pioneer editor John W. Campbell, circa 1939. He sent a fan letter to Le Zombie. I may have published it in Lez Letters. He did not write again.
