

Don＇t fall off of your shair so violently，Rick；yeh，I＇ve actualm miriten you wain．What？The name isn＇t familiar？Look， I＇A better reintroduce muself。I＇m Boff Perry．．．．．．．．．．

And to thinh you said，＂\＃ou lon＇t have to get jour Ietter to
 CiAn＇t Ir Mo matter how wuch tire $I$ sesm to put into qu corraspond－ ence，it al＂us cots far ahead of me．After this，ur letters prot－ ably will jet shorter than they usually are．But more frequent．

I＇Il continue with that serial of ours．Aind soeakine of
 the forst instalment of that story that has been …ritten yet．fiven includins part $I$ ．you see，$I^{\prime}$ ve bean rorkinj on that thing，off and on for sorieral wonths so toan， 1 sudconlu 彐ocised to finish it up． things ill probably look kind of pusheit torether（vinich tiney are） but iou＇ll eret the ist of the sionr．＇the black oube is of unknown matter but has some strange affinity to the grevitr of the Sun． ＇harefore itj is stable only when near the Sun and the afsagge， ＂Go to＂ine＂mav or hav not mean Pluto．All three rocketships hate been dinenisionnly teleported to somerhere．I＇like to toll you Where I would howe sent thew but thet woulan＇t be feir．There is a hint in the story．

I hope that mhen（and if）tho story is ever finished，that there Won＇t be any loose ends．I aislize stf stories that don＇t explain Everything．＂hus：who killed all of those jury usirbers if it Tasin＇t Boff Perry？I can＇t seam to remember．It somehorim seems funiny that Snearir（and \＆H－lmonत？）Moula tolerate Boff if they realize he once tries to buinp theri off．you＇ll also notice thot I＇ve put in a sec＝ －ontary hero in the person of Rauroina Lōnc．linet is beceuse I an tireत of using miself ali of the time．（ilust De l＇u modest！）Ain－ May，I bet ou have trouble with paごt TIII：！！

Sorpor of fee＝xcallent．I envy．The－1：nsine illustrations are also xcellent．Ged，how do you do＂1t？Aint that do you thinh of河 1170 for TrFMCP？T111 T1inlaj sue？

Hom तo you ficure that 17, COO ITR（ヨo yu uran IMPY？）ould e a totnl of 50,000 Gs？？？？？Speeत and acaeleration are timo different thines．you con speed up to and past 17，000 lup at one fravity or a thousand．The first would take uite a while anz the serond woula be denzerous．You＇re simplr got to compronise．

Whe Ronular sgience nrticle you sam was probobly toc consemr－
 but only for a rery short tiue．Insile of a suit fillee with mater and lyins down，a strong man should be able to stand 5 子＇s long enoush to be traveling t ax rery hiuh speed．I personally think step rockets are the answar to the probleq．Ahe 3 steps shoula be enouch with present－1 fuy fuels（non－touic）．And mhile a takeoff of 70 ft． per secont seems slom，that acceleration will proauce a sp＝ed of 36，000 ft．per see and in about 8 mimutes while the aistance trav－
eled ：ould be（all computationg in my heac）ahout 2，000 alles． Hhat poulc take terrific load of fuel but 2 steps would take care of practically 77 of it．When on the Mcon，the mockt ship Will be wuch lishter and the pull of gravity will be less．

I don＇t know what to write to $G \rightarrow G$ hut the following will be comentis，any of wich may be used．So inay the forejoing altho the stuff of TMTOP rill be incouprehesible to outsiece．

Sorfer song altho not up to usual Sockroft st＝ndard．I sunnose， tho，that there is a lot of aacitionel work in aaking a multi－solor cover．

Am frices and froans？Hah．That is int ruess for the name of $G-G$ ． am I rixht？Tinle iant ton fanish but that doesn＇t mean auch in these deyz of esofaric．titles like speetiness \＆Light， 2 B or lot 2 3，lesting ユーマーシート，etc．It rill probablur be appropriate．

I 7ill te Tery hariy to see TFPR continuea even tho＂it be byr Somehojy clse．As a sucrestion，I Moula propose sirinr the title to somebonj that had ocess to a real collection．Terot fem nom－fans have this oportunitu．Or better still，hor nout a FAPA Digest for those Tho are oither on the דoitins list on are intereste？in the writings of the organization but．Some reason or other mould not be ble to sust in aembershif．of course there is lot of anterial Boin tiru FapA channols thot coulan＇t possibly fintorest an jut－ sider，but I do think there 170ula he enowh to fill a aicest ever．

Jalrell＇s opinion of the requirements of a classic are too strict．Why not use Laney＇s definition as a story that sustains fav－ orable interest over an＝rt＝n？eन perion of time？？？？？I＇re just fin－ ishoł reading＂Lost Lo fon＂in ar olc Super．Science and it aeoms lilie the nuts，hut if + wo years later，I shoule forget the story， it certainly クoulan＇t bo a oln马sic．

I，like Shris＇s inea of anothor APA thyt before we mun into this thing half－socked lot＇s sonsider ferl points：

I once pronoser ollanz nearly sinishen ？constituticn for che an …as curisen bur Kennedy that，IIAPA＇s are gerious business
 have put a lot of ork into it，The CH for instance．

Then there is the finamizl iūe．The official oryan reulres fund，so toes postac？for tine mailine．Thur wo have dues ans yith
 requirsments for the parasites．What is wrong with the olci－f ashioned faizime tr ảe iciea anyom？Tell，there are a ferm things to thing about Pick．AIT $=0$ ，I heve a thot for the MFPF．Hor ghout a bureau thet buys un s＝y 20 copis of erch new nas．This will start off the nem fain－ed by givin iin a little circulation．（If you object that he migh＇t just print soine coud he knev he could sell，heve him ive the maca to the bureau na affiy his own pice to then．As people buy them，the money minus a swall remuneration for the eervice is ret－ urned to the efitor．If xtxixaxamxmexameraxx the person leaves Faman，the majs b＝coule ommed sole lü by the bureay．）Thus frerybody Who is a complatist has a chance．to set all the hem mags that come ant 80 so quickly．

I Wonder if the jets really would $\mathbb{E}$ It the ground when it lends？Especially her Lunar rocks．After all if a rocket＇s ex－ haunt is，very fiery，it shows there has be on poor combustion and the engine is Fokine imeffeciontly．Given not on a $5-90$ ，tho jet is invisible．If it 囬s fiery，like an ste illoz，then a lot of Tasted jas is going out tia end．And remember Rick，the exhaust will nrob－bly be spread out lot rather then concentrated．

Bまlanoinz show？Ant be too hard．If the Rocket is squat enough． of course a blunt rocket would be of little use in the atiuosphere but I think the ster rockets mill save the cav．were＇s an idea I sam in a mundane magazine：

I．think Will Ley uses as many as 3 steps to his rockets but I＇m not
 too sure is that is $\operatorname{lis}_{\text {is final }}$ idea or．just something he is fiscussine．Your idea of running the jet from the nose a own thru the mid？le of the ship would meet with， Tern reception．

Your idea of the forming of city－states sounds uncannily like－ lv．With the military at the head of each state wahine people ark on atomic bombs，peace would na precess would be pretty well de－ laved．Trouble is you assume that both sides are ruined．If one side starts first，it might invade and＜compat＞．．．in。 Of course，you shoulan＇t have any trouble destroying the other＇s cities but finding his A－Bomb Centers moulübe next to iuposifible．Then after vine this， you really get anery at jour enemy ans start to use biological war－ fare ana radioactive poisons．Enter the caveman again．

I fear radar mont be fest enough．Radioneves travel quickly enough and computers can act within somas but you still hate to recognize your＝hemp．As you mentioned，shooting down stratoliners
and ducks woulan＇t be so good！
I＇ve pretty well imoreत MT card file because mons＇check－ lists and．stuff will wake it pretty useless．Of course it will be arranged alfabetically and it will be impossible to put in new stuff．Maybe I＇l？copy it down onto cards an when new mags come out，I＇ll keep track of them．I nom have about 229 magazines since I Went to Mem York so that want list of yours is norm obsolete．If you return it to me，I＇ll make it in p to date．Oh yes，and I＇ll send some＂Morgentheau valentines＂with ito

I sure envy you，getting an original from planet．Maybe I should have spent more time hacking in．PS rather than the two Thrilling ass．I have cot some originals tho．，Milt Leaser en－ closed then fth the mimeograph．I have the Paul 1110s for ＂Friar of the D lack Flame＂plus one half of＂Colossus of chaos＂， another paul and a Leinenfrost．With some smell Marti originals， mu room looks pretty gond．I lao tack upextre illus from from overs．

曹品保
 4
 Sour pirn of the＂Terrible menace＂story mas quite good．I also apprectita the sepsis of whats one one before．From how on，I＇m coins totkepp carisphs of the story．And I＇ve sure put things into a mess！

Han，this Non roe guy．Mofirr told me that Monroe was nobody else then one Richard Shears of Southeate，California．Not only that but I roulin＇t be surprised if that was jour middle name？Riteronc？

## GYONI BACK IN YOUR TYP

Sover．．．Ark：Hmmarammmm Errepfff．Thadaja dean by that anyway？ I personally liked the wiato＇ling on it inclualis the shading．I admit that the drawing was lousy．Yep the whole girl is there． since it is a Martian nightclub，erperoting is on a small scale． Notice the doorman．So the female coming out of the con is merely stooped over．Simple？Your cover will be used but when 1 cant promise．Neyrbe in the 7 th issue abe aube 1 in the 8 th．I hare the spraycun cover all done for the fth，the fth mill have a litho． I mentioned that Fred Perth sent some good pics．At least one of． them will appear for the second mannish．Of course that isn＇t a prom－ iss；you know what happens ewerytiae，I try to predict what＇ll happen in my zine．

You ŞTV me permission to print＂A Fan Visits the IASFS＂． Remember？I askenfor some material for Jichil ane jour gate io per－ Mission to reprint everything in that first bim letter of yours． And that was in it．Then I edited it solve and sent it on to you （I think I did）（（Jam：I cant remember））．Well，nothing can be done about it now．

Glad jour liked＂Idतy otik Inventions，Inc．＂I tot it mas good too．I have quite a bit more material bur Adams al tho none of it
neasures up to this. I think you'll like his cartoons too.
Your turtle cartoon is hilnrious and will see print. I tinink l'll use it for a heading for Shater's article. Heh, heh!

And non, I'll do a cover for this ish of FOO ancl send it off into the mails.

Sincerely,

$u_{t}$ TERR／BLE MENACE $\mathrm{F}_{R_{O}}$
$T_{H E}$ $\frac{8}{3}$蔡 装

## THE TERRIBLE HEACE FROM THE OUT TRPLANETS

（ Part VII）
Boff Perry

Nazine slowly sat up，one hand holding her head．She winced as the throbbing increased and then nearly passed out again．After a fev minutes she reached into a sall compartment for a sedative and tried to think back to the events that had let up to her faint－ ing．That black cube was the reason for her flight to Pluto and then her father．．．．．．．there had a been terrible flash of light and．．．．． she slanced at the chronometer．Five days had passed by but in space thiswes not surprisiñ．Tite ects queerly in the void and when con－ sciousness disappears，reactions may be incredibly sloived down．Her second thought ivas of increasing hunger．Unloosing the safety belt and a little push caused her to float in a free－fall towards the mid－ dle of the rocket ship where the provisions were stored．She had pass－ ed the orbit of Neptune some little tine aco．After eating it would be about time to prepare for a landing on Eluto．

Then for the first time after her awakening sine saw the black cube．The black object slowly floated to where she was sitting．She stared，a horrible comprehension filling her eyes and then pushed herself away too terrified to scream．A few 区区区区区马 seconds later the spaceship seemed to mobble as if of gelatinous construction． Then it rippled and appeared to be tenuous like a gas．Then it dis－ solved completely．

Senator Filbow turnea to J．Berton Sran，＂Okay Sran your turn to take over．When we get to within opposition of Neptume，＂cut off the jets．No telling how far the Zamsin heve gotten to now．＂
＂Okay＂，said Cran，＂We haven＇t much further to go＂．He checked the gauges and then looked up，＂get Canner in here will you？I tinink me ought to take a．few observations．He qight as well help．＂

Filbow looked at ©ran suspiciously．＂Observations eh？I just happened to think that I＇ll stay awake while you tro talk．No hard feelings of course＂．
＂Oh no＂，Gran denied，＂We weren＇t coing to do anything．I just thot Ganner could take a fem pics of Neptune．If there are any Zainen there，we can tell the others about it when we set back．＂
＂You fool：＂Filbow exploded，＂do you think we＇还在 let the others in on this．You and I cen rake millions．．．．．．．．er，looks nice out in space now doesn＇t it．．．．．＂
＂YTever mind the cover－up＂，said Sanner standing at the bulkhead ＂I heard it all．Whaterer turns up from this will go to the Tri－plan－ etary Government．You＇re under arrest＂．The Secretary of the Tiar departmentx reached or his holstered weapon．
"Don't be foolish", sneered Filbow. You're meapon isn't Iorded either!"
"It is. This isn't the one....."
"It is alright". But Filbow with doubts in his own mind reached for his own ray gun. Canner was less sure now but did not flinch. Both men attempted to fire at the sme instant.

Raymond Long peered out of the porthole into the void. "Hey Sis", he yelled,"take a look out there. That's amother Zamen destroyer or
 binoculars to correlate his discovery. The magnification pas almost nil but he could see the almost imperceptible motion of a point of light.

Elsie Long came in with the half-7a.lk, half-push that crewmen in no-grav leern. "I suppose you've spobted another meteor. You near$l_{y}$ blasted a comet out of the other last week. Wiat do rou think we're zoin to use for rockets at this rate......."
"Allrisht if you know so quch about it, just take a look joursewf". He offered the binoculars to her. She took a short look and gasped.
"You're risht Ray! Quick ret the onmander. I'Il try to plot it's course." Long rushed out of the door and ran into the comander's cabin. The commander mas poring over some charts. He looked up. "minat's your big rush son?" zuickly the boy told him and soon the comander had sicnalled sereral other space-ships. "Well younester, I suess you spotted one okay. And now you had better set back to your station. It looks as tho we'Il finish our supply of rockets with this one."

Ro.j turned around to go. At the door he paused, "Saj, it mouldne be possible to just cripple it and get supplys from her moula it? If...."
"Sorry but we'll heire to shoot until it's Bone. Othermise, they'll call up their GHi and the whole Zamen fleet will be witinus." He looked at the youth, "a good idea tho, sorry "e can't do it."

As the Zamen destofer reached the point where the distance between the two ships mes at the ginimum there was a roarines swoosh of rockets from the stationary one. Most of the rockets missed Dy virtue of the hasty preparation for a fight but one. crashed into the rain, rocket an crippled it as the atomic enrine \%ent off with a roar. vrippled but not harmless, the Destroyer fired back in the general direction of it's assailent with even less accuracy. The crash of misspent atoms had'acted to partially halt the ship so that instead of speeding by it Res only drifting. Kockets continued to hurtle at the victia so that it's Captain deciaed to use the auxiliary rockets to guide it to 1t's assailant.

The crashing of atomic energy had made it impossible to radio back but the wazch much slower telepatinic waves mere headed out to Hars.

The Iartian ship slowly drifted to the Triplanetary ship. Both ready to fire. Only a ferm hundred feet apart were they, Fhen the action started.
"ITeptune's orbit", shouted Jok, "we're not far away now".
"ATV pipe down", said Rick, "We know it's TTeptune. Thy not do something useful like hauling out that black cube asgain? If you're not afraid it's too heavy for you', Sneary ended sarcasticly.

Tvans came down the bulknay, "needn't jother, I've gotten it already. That'cha want it for anyway?"

Boff came into the room. "Just want to make a few tests on it. I want to sea if all of it's various scientific constants remain constant in space or if they chenge, do thej reach an equilibrium?"
"Doesn't look any aifferent to me", opined Jek.
"We"Il see", ansmered Boff pickins up an extended micrometer, "dimensional data first. Take this stuff down kick".

Sneary picked up a notebook.
"25.6I5 plus centimeters on an edge". Two more weasurements. "Subed", he added.

Evans and Jok being bored by this rather theoretical research which soon developed into rather complicated fields left the room.
"When it comes to physics, I'm about as stupid as a robot", 再man grumbled as he rapped his knuckles on Jek.
"Whaddya mean "as a robot', do you think I'm a half-wit"? queriab Jek.

Erans intimated that this ilas exactly what he thot.
Cran ardowe ducked a.s twin needle uns crashed over his head. Both men droppe to the floor, their enmity fororer onded. His checrint wotwxwax the uns of all the nisht before had proved to be. deady to all except him. Shaken, he ment oror to the control panel andsat down. While cheoking the controls, he had not notlced the slow ohange of the block cube; ho could not see or feel Ion of thNamine, the Martian champion, had alsappeared, the rocket shin oh then Burton Sran slomIy mavers as ripoles of sine-ware radiation mushed from bow to stern. It too aisapneared from viem --- of the Solar Systern.
"ITell", siiz Simearu sfter many measuremonts has besin taizen, "just hat'Aoes all this prove myyay?"
"That, I' not readü to say," sefa Eoff, "suppose in e sait that it is cae of the uost absolutely unchanceable things thot $I$ ever sam. Tven the platinum metre of Paris is unstable comparea with t'ais."
"Trait, this raaiation neecle is quiverine. I thought ne proved that absolutely no radiation of anj sort could come out. Why, a black objoct like that shoulc absorb every trace of visible or in-
visible radiation. Yet...."
Doff shrugged, "pe'remrony, I cues cause there it is. Me ll all we can do is record it."

The radiation counter beam olicring in earnest. Fatter and faster until it $r \equiv s$ a continuous hum.
"Look Pick, I feel somethings going to happen; and look the size is no longer constant....the eçges are getting hazy."
${ }^{3}$ Smeary looted worried. The increase in radiation an change in size and shape was ingrearinx much more apparent. Yow the block Mas scereclur isle as it's edges vibrate त "itin greater and greater speed. The blackness slowly chanced to a grey rue. The greyness broke into a scintillation of all colors of the spectral rainbow. Next came a damming opalescence winch mes blinding to the tho ob$s \in r v \in r s$.
"Buff: This chart: It's increasing at an exponential rate: Thy 子"
M Doffs brow mas furrowed within the thowts passing thru his wind. "Wait! 'Where can os only one thing that's causing it. line shin is racing array from the sun an this tinging ohanoses with it. rive'll never reach pluto's orbit...."

Ana between the tiro scientists ((?)) came complete understand ins. As one man, they both whirled to the control panel. Rick reached it first and pulled the Emergency Halt lever but even as ho did it, he realized that it was too late that they would never stop in time. Outside the staid stars of space bergen to twinkle as tho passing thru rippling water.

Hen rears later the youthful Raymond Long was nemea mrandexats exile President of Triplanetary. His fellow fugitives had not forgotten the boy that almost sinclehandedly captured a Zamen destroyar an later lea his fellow men into more successful action against the Marian nemesis. Triplanetary was still in hiding but now that they possessed a smell $\pi$ secret newt there time would come soon.

The Zamen had extended their absolute dictatorship over the entire Solar Syst ea and were now reaching out for more room. Their first explorer has just been sent out to Alpha Jentauri.

Fandom mas nearly nonexistent nom, and the "convention" that met ias hardly larger than an confab of old mould hare been. Only one small fanzine Mas issued now and that was insecret. Collections of Science Fiction and Fantasy were hidden from both TriplaneFry and the Zamen government.
 for the place does not exist, even it's location could not be explained to those not familiar with hyperspace - representatives each of the Zamen, TriP and Fandom struggled for existence and plotted the impossible: Return to Sol:
X This humic of tripe temporarily mantis ended until our stan inciter at Southrate inures out some solution on other. Meh hah neh neh.)

Teil Rick olà top, this closes the blinds on the shortest ish of FOO wet. And it took a burst of activity, nova-like, just to set this much cone. What I've done to the stom. NIII probebIV render it hopeless butwe'll see. It could hate a nice caloctic tmist, or we dan cut it down to somethins short of the Benith epics.

The cover of POO was rattled off prettur hurriedlu decause I spent abst of mime on the illustration for "The Ternivle irenace..." Anymay, if I haci spent more tine on it, it uisht have beon aluost

Ous cover reveals a dark conspiracy on Yenus with out hero ready to blast the villeins into atoms. Pretty uessy huh. Ny tempora colors seeiled to hare aried up on me, Mrybe if I add a littie H20 or oil in them, ther'll be as good as nem. I never wos gatisfied \#ith watercolors tho. And oil colors are prohibitirelu expensive and sice I've quit my job, expenses "ill have to be cut doin a ifee little bit until collage begins.
 quired free tims what inth 14 or 15 pares coupleted and I'ia dins about one a dar. I could got it done quicker but In trutine to read a book ("Star of the Unborn") an ansmerins my correspondence (which comes in faster than $1+30 e s$ out). At any rate tinings are being ane.

Unfortunctely I've sot too much matorial this issue to include your article and even in \#6, I may have to serialize it. I don't went to sound as tho, I hare too much naterial as its only a few lons paeces en? variety is the spice of cycul.
