## HOBITALIA \#3

30 cents or $4 / \$ 1.00$
paldor boz 1444 vallejo cal 94590

This is the third issue of Hob. I thank you for your interest. Hob may be undergoing a small change. Some of us are thinking of making Hob a real letterzine. If anyone interested will type their letter on stencil ready to go on the mimeo, I will put out in issue every time I collect 16 pages, either of mine or your or both. This means Hob might be a monthly or exen a weekly. It would really be a hobbit newspaper. The news would be current and the elvish world could keep in constant touch. Plese write if you have any interest in this idea at all. I have much to put In here but a real current letter zine would be fine. Dont forgets use stencils. You can get thern from any stationary storore. Begin typing at 7 on the numbers and end at 54 and leave at least halfinch margins.

Elen silailumenn omentilno.....
I read the record of a court case reconvily. A $\$ 1.95$ paperback costs \$. 17 to make and mail, total, which seems to leave a fair bit of profit.

I have found a source of faceted emerald, aquamarine and beryl and catseye chrysoberyl, for stones from 2 mm to $9 x \mathrm{llmm}$, the prices run from \$j. to \$ $\$ 24$ o.onot the best grade but real pretty gemstonesonfor ringe, etrie. $\qquad$ - thanx to janet

Some peonle enjoy creating lngurges. They usully are quite difficult and ${ }^{2} \mathrm{R}$ g compliceted...espemanto is an emme....wich by be why ne he ve ever been adonted as an internstionel languace. Fs errent, is the anst widely use? artificial tongue, but it is still difficult. Tt is an " 3 atetion of wods fror severol european languages, combined with sonewhet str lipiel gram rules.

A true interntiona? tonge shwid be sianle it could be learned in a week or so and spoken correctly by anyone from the first attamt. The basics of such a langage would be somewhat as follows. The Dorean tongus......

Make a list of the first 6000 or so most ushd words and eliminate those which duolicate otners or are the same word as another part of speach. I doubt if you have 2000 remining.

Now choose word/sounds, preferably one syllable and as short as possible, thet re not likely to be mistalen for another, both orally in a noisy situation and written in a had hand and arbitrarily assign one to each word on prour basic list.

Choose several sounds, as eel, ees, cen, eek, eet, eeb, eej, etc. These sounds, whil will not be used in any other way are prefixes or suffixes on the besic rootword, used to change its tense, person, number, gender, part of syeach, etc. The basic rootwry isis noun, singular, neuter, present and is so watly usef unless suecific changed meaning is desired. For instance...een, as sufijx makes a motword mie. As orefix, i.t makes it fenale. It need not ke added to every word in a sentence but just to the desired change words. The usage of the first word in a sentence, say, could set the neanings for the sentence. Each of these -ix sounds has its own alpheket sambla as a seperate letter. Thus, each rootword, plus its -ixes will equal perhans a dozen othed words, or more.

The concent of the basic root changing to, for instance, a verb may be difficult a: first. Mountain, a noun, could change to rountainin...clirbing mountrins, or a fealc mountain climber, or rourtninous, or mountainly, or a mele mountain, mountains, or a nountain-to-be, or mountain-that-wes, etc, etc. Adj and adv, berhans, could be combir A caoitalization ar extra ark could change a root into a proper, specific noun.

The mownds be combined, as in german, etc, to fom still other words, with the aumouricte -ixes used only once, as manoitike, or underthebridgegoingamy. No double or silent letters in any word. If combining two wods bring the seme letters together, ons will be dropped.

Each letser of the al habet will have one...ONE....sound ondy, not a half dozen as in some cases now in our alphabet. This alone will similify leming and sjeaking enomously, os will the droping of s!ient, doubled and changing-tne-pronunciationof other-lettars-or-words type of letters and conkinetions which the world is stuck with now. Various letters, as $c, k, s$ in the english innguage have durliceted solands, and other combinations also duplicate these sounds. This will not heven in Dorian. Also, adtitional letters will be created for situctions where more than one sound is applied to one letter, as a,e,i,o,u, etc.. No cuble meanings which can lead to confusion as the letter I and the nuaeral 1. Numbers wuld have symbols, would never be written out and would be pronounced one ofl one-one instead on one, eleven, first, once, etc, tho a word could be oresumed, as first time, by those hung up on some other language, ond so reference to a number would be obvious.

The choice of the rootword list wuld be especially cereful to eliminate, so far as possible, any ambiguities, similurities and sound likenesses that could cause trouble, misunderstending, etc, and since each would hove one meaning miy in each lanzuage, tho that weaning could hove other ablications, as in a theseuris, interns ional uncerstanting would be assured, sumpsedly, and peonle overywhere, on leamin: a thousand or so wris and a dozen or so-ixes, could corresnond ensily or ever suear together. Articles arent needed in a language...Polish, for instonce. A written, serhajs non-ssorated mark could indicate cacitelization. Wore later.

Construct on could also bo standerd mine timbering and shoring, or of 2x4, 4xt, or ovon lx, with ply ood or corrugatod ple.stice sho ts ovor, or mocd, and plastic sheoting drapod ovor all to scal. Or a hole could to due, tho sulial buidt and tho dirt dumpod back over all. A covering of a plostic ( 6 ril?) shoot ovcr all mould clininato loaks and holp koop all dry insiac.
 against the sidos or attached with do cils in drillod holcs, po:or-inscrtod mounts or modorn gluos. Evo ything possiblo should be stainloss, rust \& rot procf, otc, as they shovid be in any cosc for durability and longlasting.
A hoavily filterod pipe can lead to the inmost roon or roons, the intake in the front room and powerod by a lo.. current de fen oporatod by an auto battory. This coin bo constantly rocharged by a solar coll arrangencnt or an auto gencrator powored by a small propellor can bo mountod on a polo. It must be wat rprofed and governorcd. Most any appliance can be workod the same ray. A "linc in the sky"l is a doad givoavary: You con usc butano lamps with a trailor tank for sovoral nonths supply or use koroson lamps. The Aladdin lamp is much bettor than the old f, shioncd lamps and Tilly, Englank mokes a much bottor prossuro koro lamp than tho amorican types like Coloman. in s.im tank $5^{\prime}$ widc, $50^{\prime}$ long and5' docp in contor can bo mado of concrote or cvon of draped plastic shooting. Usc your imaginatica and jour musclo in place of the moncy you dont, hevo. Whetover typ of shoring you uso, nover dig under on unsupportod roof. It coul? collapse and bury you. Use tomporary, oversize saw crscs and hoavy plyti or $2^{\prime \prime}$ plonks over you if nothing clsc, thon bako thon apart and usc in bulding lator. Plant tinings above the cavo to stabilize the soil. The roots will tic it together. Narrow tunnclis aro safor than wide. Radiation moves only in a straight lino so a right onglo turn and 101 of soil will stop it. A good book on mining and shoring is von Bornowitz. A hocivy pipo (proforably bont in a helf circlo) can also bo uscd with 3/8" plyti (1, 2 or 3 lajors) or $l^{\prime \prime}$ board boltod to pipo and coverod with plastic sincot can bo usod. Also cut tres could bo froo or scrap rocd or old railroad tios soll choap, but romonbor, 101 of dirt is hoavy. A small, hand typo pipe bondod can bo ronted. 2 or moro tilos togothor could storo longhandlo tools. Toopoc style, triongular shoring could ovon bc uscd to givo an upsidodown $V$ shepo tumolo, Icxan, a GE plastic, \& ${ }^{\text {dass }}$ is 250 x toughor than glass, will stop a 45 bullct and would bo fine for windows.

Storago can be in smajlor tilos. Put saranmap around flarod ond and pour $2^{\prime \prime}$ comont with nylon rope, mood dowell or fingorholos moldod in for handlo to form a lid. Turn ovor, fill othor ond $2^{\prime \prime}$ for botton. Bury, fill rith food in plostic bags (maytoc dry icc or wot carbido for incrt atmosphorc), put on lid (najbo thin rubbor for acal), lay plas shoct owor and cover with dirt for iniddon food catch... rust \& rot proof and no motal to register on a metal dotoctor....romomber whoro you hid it.......

Uso a guzzlor for a wator suply. This is nethi g ncro then a shoct to gathor wator and ah undorground tank to hold it. Gno porson yrcbably nocds a gallon or more por day for drinking, cooking, sono washing, otc and two wonld bo bottor (tho I adviso cating ovo gthing possiblo uncookod for hoclth, which is 365 gallons minimum por porson por your. 4 cubic foct ( $1^{*} \times 1^{1 / x I^{1}}$ ) is about 10 gallous, so a 500 gal tank woula bo about $88 \times 89 x 8$. Rainfoli is figurcs in inchos so a rainfall of say $12^{\prime \prime}$ is onc cu ft of wator on oach squure foot of land por ycar. You would nocd an apron of 23: x23. to colloct this 500 g . If tho rainfall wore $6^{\prime \prime}$ you would nocd about $32^{\prime} \mathrm{x} 32^{\prime}$. Actualis doubling this would bo bost to allon for washing the apron, acciconts, a yoar of de ficiont rainfall, ote. The tenks should bo at loast 101 apart for soil support for the tank ralls to provent caving, otc.

A smial is an undorground home. Tho nord is trkon from J R R Tolkicns botks, THE HOBET and the 3 vol set THE LORD OF NTE FIS: It Was a cave homo uscd by hobbits, ? who wero littlo pooplo who avo a lot,g ratiod gurdons and vere usully vepy jolly. The smial was usually dug into o. be w, The livi roon would heve wiadows and faco the garden but the rest of tho recms (Ne己心 cithor side of a long haill which rive the a back duor at the oind.

An underground home is wanmo in in tijintor and coolor in sumenor bocauso the tomporature undor a fow foct of growd is almost unchenging winter and summer. It can also bo damp. Sinco tho suriface of the land is loft clear for growing thing it is moro co ocologically sould than scattoring man and his stuff $2 l l$ over the surfaco. Grocncry rill clcan and cool the air and dondon sound pollution and concoal.

A numbor of rosoarchors say wo will bo living in $u / g$ sholtors, at loast to slocp, cat and rolax, tho wo will go out for mork, for morc than 5 yoers aftcr tinc list borv hes fallon bocauso of rosidual radiction. Tho small amount at that timo would prowably not sickon us innodiatcly but continucd lo: cxposure tould causo loukomia and cancors (as $x$-ray and ovcroxposuro to the sun doos now) and thru genc-damage cause mental and physical damago to our children. In addition it rould matorially shorton our livos. It hes boon proven that radiation, oven the saell, comparativoly, amount wo get now doos shorton our livos. This is donc, it is sumisod, b, knocilng part (roconstruction ncmory) off the dno choin. This rosults in replaconont of failing colls by loss than "origizal quality" roplacomonts.

In any casc, ono can livo ciritic comfortably in tho hottost dosort land in a smial. In doscrt cools rapidly whon the suns dircet rays are gone and will not hoat up unt:' the middlo of the noxt morning. In the hoat of the day the modern hobbit would stay in his smial. Tho smial, bocausc of its construction and location, is comparatively safo against firc, flood, rindstorm, fallout (it should havo 10 foct of soil botwoen it and the surface), vandalism and thiovos. If found by thicves, and this is not too casy bocausc nothing shows abovoground as in a rogular housc, it may bo robbod but it caninot onsily be burnt or tora up. It is also a less tarobvious objoct.

Tho smical may bo built of nany matorials. Comnorcially built, and jou nouldnt bolicve hov popular this typo of hone is bocoming, it could cost $\$ 375,000$ or more. It can hevo an $u / g$ swimning pool and gr onhousc. But a smial can bo built for a fow hundred, or much loss if you cro a geod scrounger. Labor is the big thing end nonc of it is too tcchnical.

Tho proforiod motoriel is reinforcod conercto. Conmoreinl concroto sowor pipo can os bought (damaged, it is very choap) in dianctors of 1 to 18 : or more. It is gencrally as long as it is wid?. A $4^{9}$ dia $\times 4^{8}$ longth picco can bo uscd for tumols, stororoms or closcts. A 101 can bo used as a room with a rood floor part way up and the undor spaco usod as storagc. Half an $18^{\prime \prime}$ can bo a roor $9^{\prime}$ high at tho contor and $18{ }^{\prime} \mathrm{x}$ IE' c

If you proforred to maks your own, forms could b constructod of bent pipcs linca :Uith $\frac{1}{4}$ plywood. Sct a largor form over a smallor and fill tho spece betveon with stonos, rirocloth, iron rods, wot it all down and pour in comont. Whon it sots, romove the forms. Any dosign could bo uscd; I lovel, split or multi-lovol. Your imagination scts the wly limits.

Concecto plpe can be uscd for tuncling by dieging in $2^{\prime}$ and placing a $4^{\prime}$ pipe in the holo. Continuc disfging and by using a bar to lovor the pipo furthor into tho he? as you ding so not over a couplo fot of recf aro ungunded. Tho holo should bo just slightiv bigger than tho o. $d_{c}$ of the pipe. When the first pine is all the way into in hole, set a socond, cte and koop them not noro then a foot or two apart so a carois. wont bury you. This must bo dono in fairly solid soil or it may cavo promaburoly and yoult havo a problon noviag yout pipos. Probably tho dry soason is bast, Wath shoul Do packod into tho spacos arcund tho pipos as you finalfill. Pipos could also bo iared on tha outsido.

The faries in English Tradition; K M Briggs... The other thirteenth century tele, thet of the gryen children: (Relph of coggeshall rolls, series $66, J_{n}$ Stephenson) is more unsual still and has a curiously detailed and convincing air, it is an eccount of two children who were captured near tolfpits in Suffolk. They were of a pale greenish color, They soemed stupified and frightened, and did not understend whet wes seid to them。 They refused all food at first, then finelly did eat broad beans with eagerness. They gradually learned to eat mortal food. The boy pined and died, but the girl survived, lost her green color and learned to talk.According to her account, they lived in an underground country, where there was neither sun nor moon, but a soft light like twilight. One day they entered a cavern and heard a soft sound like distant bells, which they followed until they emerged into the full light of day. The sunlight so stupified them that they fell to the ground and were caught. Both children were baptized and the girl grew up and married a local man, but she was always rather free and want on in her behavior.Willam of Newburg confirms the account, and adds to it that the girl celled the country St. Martins Lend and said that the people in it were Christians. (Guilidini New brigensis Historia, Oxon 1719.libl, c27), it is, perheps only a coincidence, but broad beans are traditionally the food of the dead, and the witches imps were often called Martins, or Martinets....

Euphoric acid, discovered in the reign of Hamorabi the lawgiver, when combined with alchol, produces euphoria and forgetfulness.

I don't think I have scen a map yet, other than mine, with the northern path through Mirkwood that Bilbo and the dwarves followed.It runs from near Carrock northwesterly, crossing the stream of Enchantment to near the Lonely Mountain.

How do you make clotted cream(Beorns favorite)?
If you ever have the opportunity, go to the Hok River country in the olympic Mountains and leave the road and go into the lowland forest. It is so thick the greenry below five or six ft.ofton diss and rots right on the trees,much like a little Mirkwocd.

Are other Tolkien zine publishers intrested in trad. ing?Hobbitalia will be out quarterly, at least.

A good hobbit-hole would be easy to build:

1. Find a hill
2. Dig a hole $15 \times 15$ : $x$ depth required plus whatever setback is necessary.
3. Pour $15 \times 15$ concrete floor.

The apron is simply a large, slightly sloped pice of (best) concroto with a lon mall around it to exclude loc.vs, otc. It cen also bo mede of plastic sheet (which doosnt last lone in the sun but is chap and can be tran up in the dry seasons, or rammed earth or bitumin (which mat five tho cater a bed taste). Tho concerto nod bo only an inch or two thick, warren reverence with tiro cloth.
 hardware wire cloth to prevent criminals from falling in and droning and sermon to exclude insoctse This should bo mollafastonod to resist claws, stones, otc.
The drain leads down into the curtin.. about $4^{1}$ undorground...the $4^{8}$ of earth insulatos against heat evaporation. It should bo more or loss vatortight. Tide, again, :111 do.
Tho tank, preferably is of roinforcod concrete and you should have two, ce ch with its own drain (ono can bo plugged to direct water into the other). A manmsizod manhole, with cover, should bo in the top of coach to facilitate entry for cleaning, repair, otc. It will bo covered with orth oxoopt when entry is desired. Tho tanks Mi Y bo barrels, or sheet iron or oven old fuel or gas tanks. I mould advise pointing anything $u / g$, incl wood, with roofing-tar typo paint to protect against rot, tormitos, otc. It may also bo constructed of wood, oven scrap ( $2 x / 4,4 \times 4$, mINN, oven 1 x ) with plywood walls. This could bo tarred and used as is but I mould uso plastic shooting inside. The heavy ( 6 mil?) shoot ( 20 to 501 wide) sold by socks and ward building supplies round be ok, just lapped into place or cut and hoat-scalod into shape. Uso 2 or 3 layers inside och other for security, each made soporatcly and chook for leak and holes before using, Colorless would probably bo best as color added woolens the material and may dissolve into water in tine. Sand smooth the inner walls ont pod them With corrugated cardboard. Leave plenty of slack and glue, net nail the cardboard and pleas in place. Tamp soil moll around tho outside of the forms so they will not stretch and give and tar the plastic.

The water may be extracted by e scporato pipe, but if the ser on is removable, lilo screwed or dropped onto pleco, a hose can be used with a small puri. Even such a fool. proof thing as the simple squcczo-bulb water "pung" sold at acuariumfish stores for a couple bucks (also Hortor) will do fino, ts light night and durable. If you build a smial ( $u / \mathrm{g}$ house) you can just tap in with a pipe and spigot at the bottom of tho trunk.

Depending on tho soil, a dirt form within call mood top night bo possible.
Trensportation....consided a bicyclo.....jou cen buy a tiny motor node to attach to it. It runs a mall rhocl against tho bike tire and gets a couple hundred milos to a gallon of es. Tho tank only holds a quart or so.

The grammatical rules allowing the formation of an extensive vocabulery froin a relativelt fow rontwords is indeed a unique lingristic experience and the product of an extemely advanced and intellieent people.

If one vere merivited a murely snaculative fuess, it might be assuned thet tho incathering came suddenly, perhaps in resronse to an enormous threat to survival. If numbers of friendiy peoples, or, at least, not active enimies, were suddenly throm together, a leader with sufficient ability and sufficient influence with the different peoples, could derive from the competing tongues, one lancuage, a shortened one could almost say, which could be quickly and eaisly learned by great numbers of people, and so serve as a linua franea, an intergroup forum of speech. It was evidently so, and this became the national language.

This alliance must have included men of many nationa, habbits, dwarves, Elves, and perhaps individuals of other races. Really the imarination cringes from the thought of the tribulations which must have beset any pooples to drive them so:As excavation progresses, we must expect a tale of sorrows and endings.

Finally, however, the alliance must have broken and the verious races scattered. The ruins show evidence of fire and distruction.As we believe, the Iittle peonle now exist only in tiny scattered groups, shy and hidden from mano what a glorious heritage we have lost:

Archievist, For Buckland Village.
Intensive study of the recently excavated materials from the Cornwall dig has thrown new light of this final form of the Cirth, which is now called the Dorian Mode or Angerthas Dor, We now know mush more of the etymology of the language and are now in a position to show the grammer and usage, and compile a basic word list.
 nautral. Many extreamly shortened from the origional. The noun form, tense and gender mey be changed. By the addition of a simple prefix or suffic. The only exceptions are connectives, expletives, etc.

Two or more words may be combined, if together, they form new word, as animalbitelike, or similar to the bite of an animai, or a specific animal may be named.

Letters are not doubled. If the joining of two words place two identical letters together, one is droped, as hobitalent, or talent snecific to a hobbit.

Derian Cirth has only one case.No words are capitalized.
All mainform(basic or root) words are present, mesculine and singular.
5. Pour concrete front and back walls,allowing for any windows and 6' dia holes for tunnel entrances. 6. If you want another $15 \times 15^{\prime}$ room, use $6^{\prime}$ dia.concrete pipé for connecting tunnels and reneat steps 2,3,4,5,7. 7. Refill remainder of hole with soil.

Following are a few fiacts pertinent to the Cornwall Alliance and to the form the Ennorian tounges assumed.

As the artifacts indicate, Cornwall was the scene of an ingathereing and confederation of the remnants of many divergent peoples into a viable nation, the site was occuried for several centuries, the peoples rising to greatness and thenfalling away until the final inhabitors of the land, then a sweep of sylvan glens and rivermeadows, were a tiny people who were finally ended, or dispersed by the advancing Picts(see Hobbitalia \#i for infomation on the first archaeological traces found). It was these discoveries of ultra small arrowheads and belted crystal balls which first drew the attention of the archoeological world to this area.

It is probable that the present day British Isles and Ireland were the final home of the little peoples as a cohesive nation. Indeed, these islends are believed by some, as deduced from the superimposetion of recent maps over older, to be the origional site(or quite near it) of the Shire, their homeland at that time, the events of the epic poem of the Ring. Borrowings are obvious from all Ennorian lanquages, and clearly show extreamly diverse?. derivations. The relics found in this dig are the most recent traces of this group found.

These isles also have, by far, the most legends of the little peonle,with occasional supposed sightings being reponted, even to this day.

It is not know if the final move to these islands was made before or after they became seperated from the mainland.Also,it is considered quite possible that a slow subsidence of tha land allowed a centuries-long migration to the higher lands as the seas crept ovet the lowlands.

The language, in the form assumed wh at the height of the building, is a strange blending of several third age languages(with borrowings from the Black (rc). with severał oripional aspects added which, when taken together, form an entirely new mode.

Many words were shortened to one or two syllables and the practice of word-building was inaugerated. This, still is practiced by the Germans, amoung others. It is a joining of several words to produce a new word thought. The practice of severe wordform shortening, began some time earlier, and one of the chief characteristics of this mode,made these new words less unwieldy.
