SPACETEER was pubbed by LIN CARTER 1734 Newark St. S., St. Pete. Fla. Co-edited by BILL PAXTON, Dearborn, Mich. 10¢ a copy. (V)SUB; ()TRADE; ()COMPLEMENT. A non-profit, amateur fanzine.

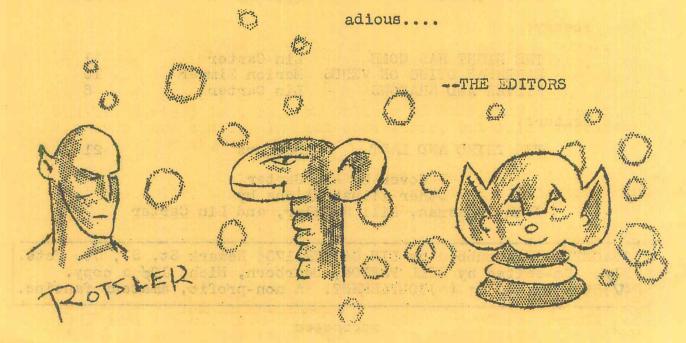

SPACETEER SPEAKS

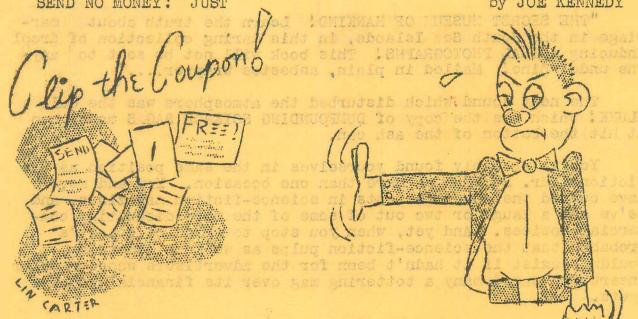

Yes, you read the cover right, this is our First Ann-Ish. The first issue of Spaceteer came out just one year ago. And this, our third issue, is also our last issue---but you'll see more about that on the last page of this ish.

For our First, and last Ann-Ish, we have planned a bigger mag than usual. You will find another article by Jack Clements, on artists, this time; an article by Dale Tarr; one by Robert Stein; the usual columns by Storer, Brazier, and Brown; poetry by Marion Zimmer and Lin Carter; letters, the Gallery of BEMS, and so forth. I may even have a story in here some where, but faint research fails to find it.

Several new fanzines have plunked into my mailbox recently, that I think are worthwhile investigating. One
is Fan Artisan, published by the Fantasy Artisans, a new group
of fan artists, at Box 105 Los Alamos, Californy--oops! that's
the club headquarters, the editorial offices are at Box 1746,
Orcutt, same state. A 45 page mag, profuse with fine mimeoart
by the members, among which are Russ Lanning (remember that co
ver on the first Loki?), Bill Rotsler, and others. Fine Zine.
The other is The Time Machine, pubbed by Gordon Mack, Jr., Box
138, Lake Arthur, La. Tho the printing and artwork could stand considerable improvement, the material by Joke, Con Pederson, Ricky Slavin, and (hrummph) me, is quite good. Both mags
are a dime.

Thassall there is for me to say. Full information, on the folding of this pearl-among-zines, is to find on da la sta page. I said that before.

Moe Steffan lounged in a deep easy chair. In one hand he clutched the latest copy of DUMFOUNDING SCIENCE SAGAS. Eagerly he scanned the story he was reading -- a super epic by Ray Bummings, entitled "The Winged Girl Deep in the Heart of the Golden Microbe". Entranced by the author's description of flashing ray-guns and roaring rockets, Moe Steffan's hungry gaze gobbled up page after page of the narrative. This is what he read:

"The Winged Girl flicked the stud and seven billion volts of atomic destruction soared out into the black of space. Fifty milion Martians bit the dust. The arching void was filled with rusty metal and reeking corpses, as the Plutonian Space Vultures soared hither and yon, snapping tasty morsels from the floating bodies. The Winged Girl sighed, swivelled her well-padded hips around, and faced the hero. 'At last!' she breathed, 'we are alone!' The hero gulped, clutched her closer, so tightly that her thin space-suit, stretched to the breaking point, suddenly snapped, and -- "

"CONTINUED ON PAGE 126"

Desperately, Moe Steffan flipped the pages, his brain on fire with a desire to finish the story ... What would happen to the luscous Winged Girl? What would happen to the hero? Reaching page 126, he frantically scanned the page. This is what he encountered:

"RUPTURED? THEN TRY THIS OUT! Old Doctor Slopp's Home-Froven Recipe will fix your little trouble up in a jiffy! Old Doctor Slopp makes his rupture supports from only the finest of discarded tractor tires...

"MEN! LEARN THE FACTS ABOUT THE OPPOSITE SEX! This FREE book rips the mask from their fair faces ... "

"BANISH THE CRAVINGS FOR TOBACCO AS MILLIONS HAVE! Is your mouth gummed up with bad-tasting brown fuz? Does your saliva remove the silver plate from the forks from which you eat?"

"THE SECRET MUSEUM OF MANKIND! Learn the truth about marriage in the South Sea Islands, in this daring collection of drool inducing ACTUAL PHOTOGRAPHS! This book will not be sent to anyone under nine! Mailed in plain, asbestos wrapper..."

The next sound which disturbed the atmosphere was the dull PLUNK: which was the copy of DUMFOUNDING SCIENCE SAGAS made when it hit the bottom of the ash can.

You've probably found yourselves in the same position as the fictional Mr. Steffan on more than one occasion. You and me, we have cussed the advertisements in science-fiction magazines, and we've got a laugh or two out of some of the more disgusting commercial notices. And yet, when you stop to think of it, it's probable that the science-fiction pulps as we know 'em today, wouldn't exist if it hadn't been for the advertisers whose regular insertions eased many a tottering mag over its financial roughspots.

Since the beginning of stf. however, fans have been complaining about some of the weird items which have cropped up in the ad columns of their favorite prozines. Back in the mid-'20s, some of the ads were a heck of a lot more objectionable than those which fill the mags of today. In the ancient Wild Western and Detective mags, from one third to a half of the advertisements frequently concerned spicy volumns, quack medical cures, luridly illustrated books on the mysteries of love, and other fascinating commodities. Hugo Gernsback got many a complaint for the ads for SEXOLOGY MAGAZINE and a few other such items which occasionally cropped up in the old WONDER STORIES; but I remember that he usually brushed off letter-column objections by pointing out that "advertising is the life-blood of any publication, and we suggest that you READ the advertisements you criticise. On closer inspection, they may not seem so bad ... " Maybe the latter comment was an attempt to get people to pay more attention to the commercials!

However, of all the gruesome ads which I've seen in the proz I think the one which stands out in my memory is a back-cover, which appeared on SCIENCE FICTION STORIES half a dozen years ago. This ad showed a huge human foot, in the final stages of disintegration from athlete's foot, with scales and sores depicted in nauseating detail. Down below, there was a coupon which you were supposed to clip and mail in with a couple of bucks for a bottle of So-and-So's Lotion. The ad was hardly recommended-reading for people with weak stomachs.

Not all the ads are uninteresting to fans, however. The old AIR WONDER and SCIENCE WONDER STORIES were frequently chock full of intriguing science-fictional ads for Gernsback's varied enterprises. Gernsback, you will recall, used to advertise colored original covers for sale to interested readers; he used to devote page after page to plugging science-fictional companion magazines with detailed cuts of their covers; furthermore, he'd advertise his

Science Fiction booklet series all over the place. As some rival fan writer (Sam Moskowitz, quite probably) has put it, Hugo Gernsback was a more devoted science fiction fan himself than any of his most avid readers. In WONDER STORIES he also established the science fictional classified-advertising column, where fans could advertise mags to sell or swap, air their Want lists, and so forth, at extremely low ad rates.

In recent years we have a semblance of this sort of thing in WEIRD TALES---where pages of ads announce the latest offerings of Arkham House, bargains from dealers like Cheney, Korshak, and others of the ilk, Ackerman's fantasy specials, and lots of other stuff. As another rival fan writer (again, probably Moskowitz) has put it, the ads in WEIRD TALES are often more interesting that the stories!

All of whick leads us to no special conclusion, except the obvious fact that the ads are here to stay, and we might as well put up with them. Some of them can be informative and profitable.

Therefore, when next you flip open the latest INFAMOUS FANTAS-TIC ENIGMAS and find the conclusion of that Haggard reprint nestling cosily among a welter of screaming advertisements for AUNT MATILDA'S SOOTHING SYRUP FOR CONTENTED KIDDIES and SENSATIONAL NEW GADGET FILTERS ALL THE GREASE OUT OF YOUR CAR! and LOVE DROPS...THE PERFUME THAT MAGNETIZES MALE NOSES...

Grin, brother, and bear it.

SILVER AND SHADOWS

Silver and shadows Windblown and flame Darkness and twilight Until you came

Thundor and fury Tempest and cone Crystal and topaz All is unknown

Out of the shadow Sweet sorcery Out of the chaos Eternity....

---Lin Carter

THE CHECK UP BY DONN BRAZIER

A story like "The Person From Porlock" and that earlier one from UNKNOWN about accident prones has set me to wondering if there really are accident prones and persons who do not want inventions to succeed, are there other types of forces operating in somewhat the same way? For instance, something that causes it to rain right after you have (a) washed the car, (b) sprinkled the lawn, or (c) decided to go to the ball game for the first time this season? Or something that causes the refrigerator to be as bare as Mother Hubbard's cupboard as soon as you decide to enjoy the cold bottle of beer you knew was there, or the summer sausage you had been saving for a sandwich? Or something that causes the library to be closed for some holiday, the day you lug an armful of books there; ditto with the bank and a pocketful of cash.

Was and

Concurrently with the late flying disk mystery something else was going on. Dr. Zwicky was shooting stepped rockets into the sky. in an attempt to make man-made satellites. The experiment failed. The papers didn't say what happened to the hunks of matter...presumably they must have fallen back to earth. Flying saucers? Here and there, too, unknown things were crashing into hills, buildings, even people. Might be interesting to have Dr. Zwicky blast away some more and then check for flying saucers shortly thereafter.

When I published EMBER, a poll was run as follows: all the books, magazines, etc., which you are re ding at the time." Only ten readers sent me lists. With my own added to the others, here are some results:

1. ASF led all pulps, being mentioned on 8 lists. Nearest competitor was TWS with 4 mentions. Other pulps were: New Worlds-2; 55-2; Planet, AS; FFM all one.

2. 16 other mags appeared on the lists, with LIFE leading A with three mentions. Nost strange was Better Homes & Gardens. Those getting two mentions? New Yorker, Esquire, and Air Trails.

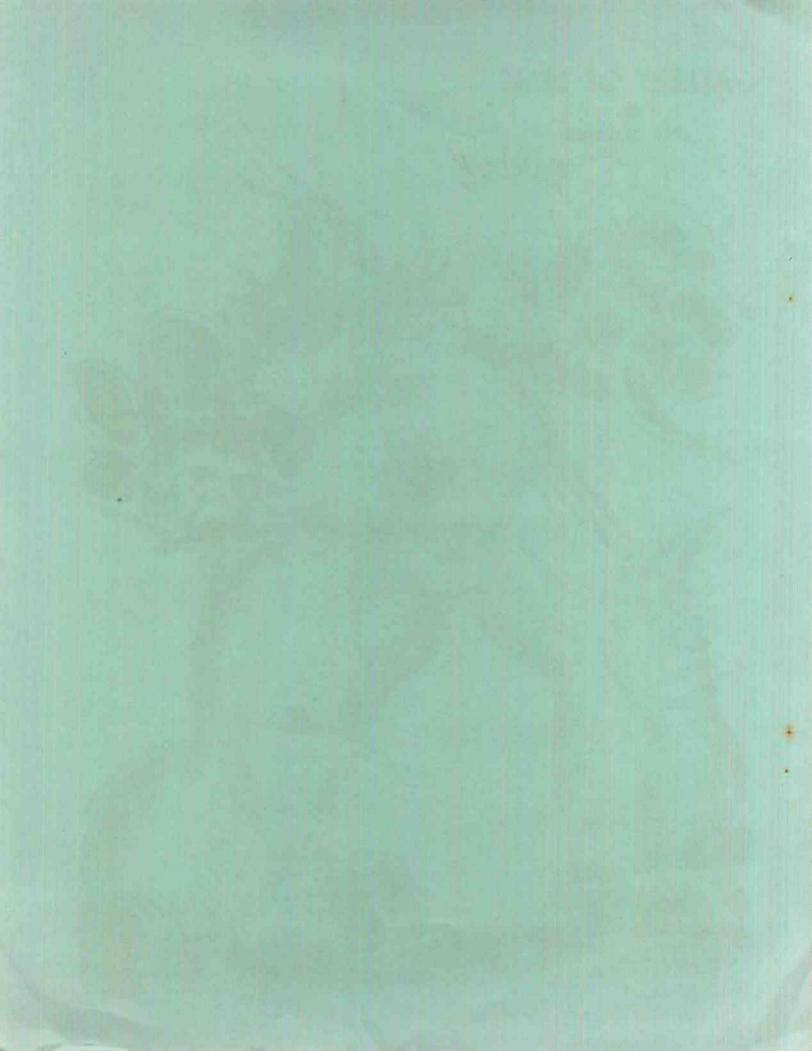

3. A total or 57 books were mentioned, making an average of over 5 per reader. All fields seemed to be covered, take a look: chess, jazz, semantics, physics, religion, math, biology, general science, and travel, and even a manual on marriage:

((Donn's column was squeezed out of the last issue ----ET.))

JOHN GROSSMAN

Those Italicized Leads!

JOAN TO THE TOWN

Every once in a while you run across a story at the start of which, the author has appended a comment in Italies. These italicized leads generally take the form of quotations from some supposed authority in the future. The darn things intrigue me; and I always find myself wishing I could find, somehow, the real thing, a leaf from an historical book of the future. Take Isaac Asimov, for instance, ((you take him)) who is one of the more frequent suppliers of my addiction. Before going into his "Blind Alley" he quotes (and I quote Asimov):

"Only once in Galactic History was an intellegent race of non-humans discovered." from Essays on History by Ligurn Vier."

Asimov goes on to tell the story but that is beside the point. We wonder whether the other development is right, and there
are a good many non-human intelligences. Ligurn Vier is a favorite historian of Asimov's, for, before "The Big and the Little",
we get the following quotation from the same source:

"Three dynasties moulded the Beginning: The Encyclopedists, The Mayors, and The Traders-"

That brings up strong memories of the Foundation Series but it also makes you wonder about Ligurn Vier. Just where is his epoch? And over how many untold ages does his writings extend?

Pity the poor historian of today, with a paltry 5000 years to draw on! Ligurn Vier may have had a million years of tales to weave from. And what experiences! Not drawn from a miserably small single planet, but from across the great reaches of space; galaxy upon galaxy. 'hy doesn't Asimov write us a story about this Ligurn Vier? And now, speaking of galaxies, let's see some of Norman L. Knight's exerpts from "Galactic Cronicles".

Before "Bombardment In Reverse", Knight says: "The foll-owing narrative is an exempt from "Galactic Cronicles", a monumental work on extra-terrestrial history by the Earth-born Martian historiographer, Ilrai the Younger, who flourshed about 2600 A.D. He regards the tale as of doubtful authenticity, and is inclined to classify it as merely an interesting legend. It —continued on next pg.—

WILL WONDERS NEVER CEASE DEPT: In latest AMAZING (October): "I want to....point out to you fans and readers the very excellent editorials on science and science-fiction that have been appearing....in THRILLING WONDER STORIES..." Egad: The Millenium is at hand!!!

is hereby reproduced as no more than that."

This kind of rabbit punch irritates the hell out of me. One notes that Knight evidently figures space travel to have reached galactic proportions within a comparatively short time. However, if the time-weary era of Asimov is as old as the writings seem to indicate, 2600 hight not be too early for a fairly good start, at any rate. Perhaps Asimov's Foundation only lies about 50,000 years ahead.

Ilrai the Younger is also an intriguing figure. But we digress from the rabbit punch; certainly the story was a little on the humorously implausible side, but why set up a historical authority, only to blast authenticity to shreds with those last two sentences? But perhaps I am too severe. Presumably even historians have their lighter moments. Anyway Knight has more to say of Ilrai in introducing the "Testament of Akubii". Here he speaks of Ilrai as having combined an amazing literary activity and an insatiable curiosity, with a weakness for good stories incompletely verified. The story which he writes is supposed to lack documentary proof because the chief source of information was on a "solitary planet accompanying the star Delta Prime in the Hyades". Delta Prime later exploded into a nova, conveniently destroying the proof. It's too long to quote in entirety, but here's some:

"It seems that the space port on Aldebaran III was an ill-conceived venture, which was hastily abandoned after a few years, for reasons which need not concern us here."

The fact that the space port was abandoned is not any more interesting than a squalid 'ghost town' of fairly contemporary times, to me. But it was abandoned <u>hastily</u>...maybe Knight wrote the wrong story!

Heinlein, in prefacing "Universe" gives this tidbit: "The Proxima Centauri Expedition, sponsored by the Jordan Foundation in 2119, was the first recorded attempt to reach the nearer stars of this galaxy. Whatever its unhappy fate, we can only conjecture--" "Quoted from 'The Romance of Modern Astrography', by Franklin Buck, published by Lux Transcriptions Ltd., 3.50 cr."

For some reason beyond my comprehension, Heinlein quotes the above lead also before "Common Sense", the sequel to "Universe". Maybe he was too tired to think up something else. Anyway, the date given, 2119, is not so very far off. Will we be advanced so far by then, that we will be trying for the stars? 2119 is only a matter of 170 years away, and it seems likely that we'll be 200 years at least, negotiating the System. However, we're likely to be on the Moon, Venus, or Mars, before we even get to the bettem of our own oceans. And then, if 2119 is the date of the first attempt to reach the stars, it places Knight's guess of 2600 for galactic affairs within intensified reach. Still, I think we'll have to go some. Remember the size

THE NIGHT HAS COME

The Night has come.

And darkness nears with slow and sable wings

Across the skyey vault.

The dying Sun

Expires in crimson dusk

Upon the western hills.

The Night has come.

----Lin Carter

of that ship in "Universe?"

George O. Smith stuck his neck out once with an item also too long to quote in its entirety: "During the Third Interplanetary War, Atomic bombing sprung up, died, and then continued on a very strange nuisance value basis." --"I.A. Seldenov's History of Sol. Vol. IV"

It was strange, all right, and some nuisance! Here we of today are worrying our heads off about the consequences of atom bombs, and Smith blithely dismisses it with an almost patronizing wave of his typewriter.

There's a few more of those italicized leads scattered thru Astounding's back numbers, but not nearly enough to suit me. They are a sort of mirror of the authors' guesses as to the future and I'm interested. Take Asimov's opening to "The Wedge":

"Never let your sense of morals prevent you from doing what is right."--Salvor Hardin

Remember Salvor? Considering the variety of opinion on what is right, perhaps he should have said: "Never let your sense of right prevent you from doing what is moral."

No?

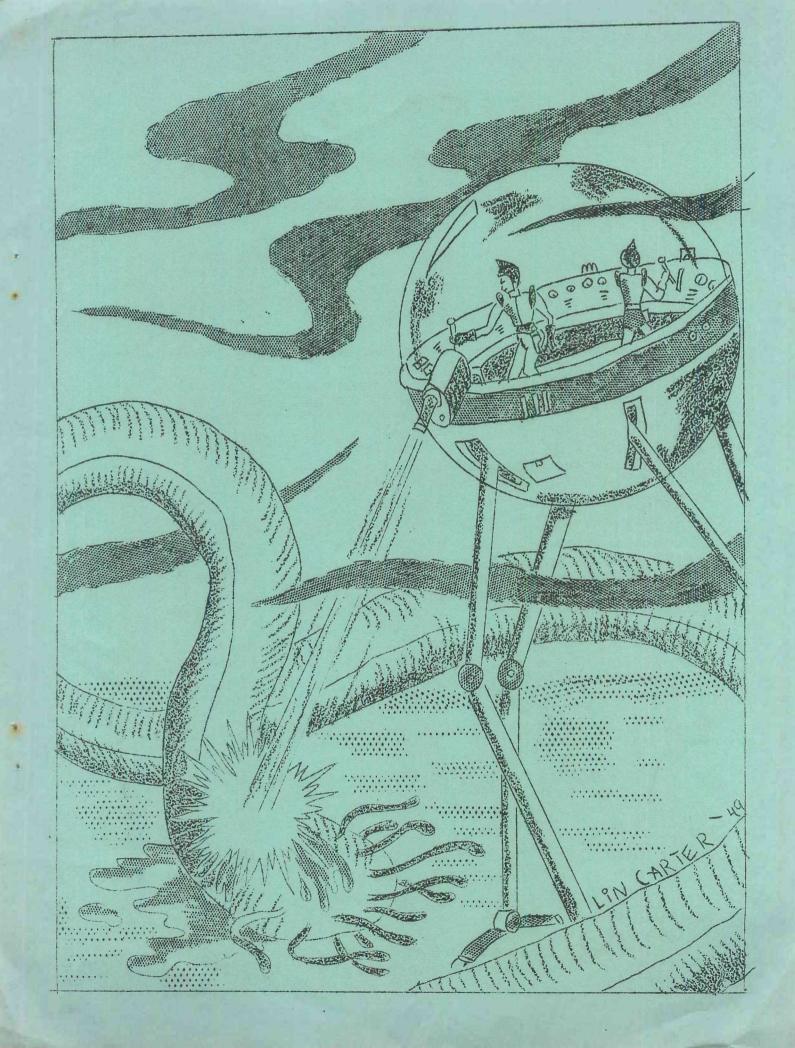

scientifiction fan, as a rule, is not overly sensitive. It is a difficult achievement indeed to get any strong emction except pride out of him, except on rare occasions when, for instance, he discusses the latest issue of Fearfully Stupefying Storles with an non-believer.

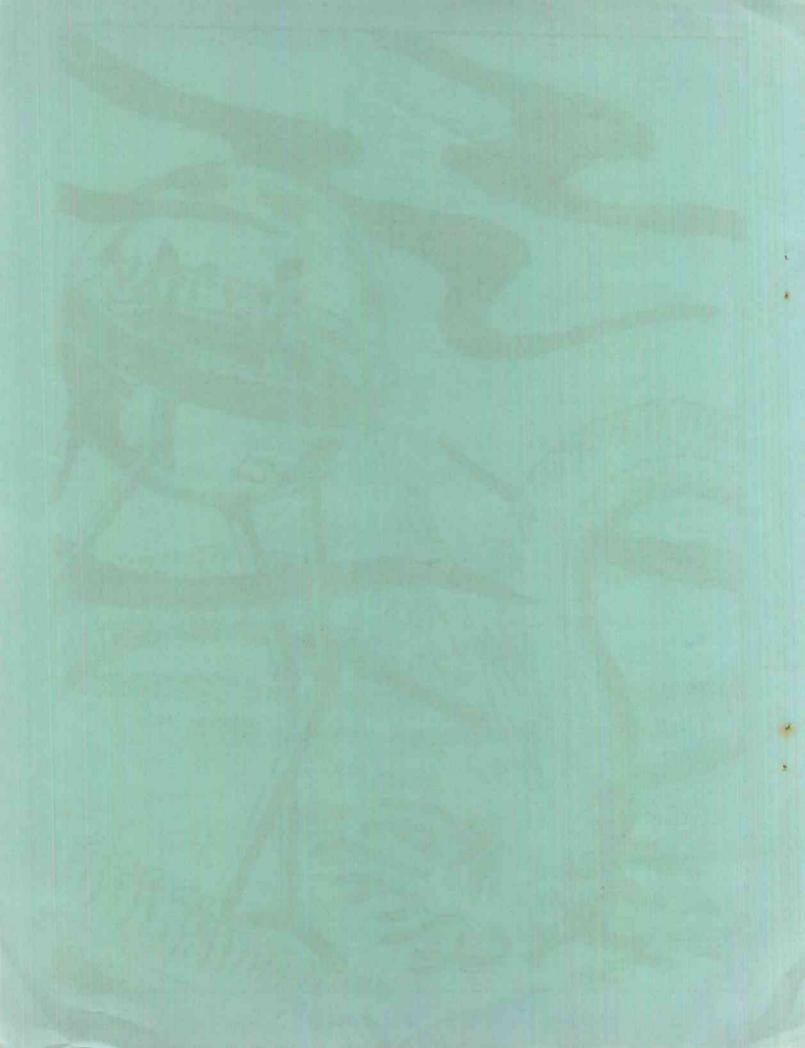

But mention the name of Morton Hulkmore to any actifen even slightly acquainted with events during the fateful summer of '48 and you will get a veritable bargain basement of emotions, moods and involuntary facial and mental reflexes pursuing one another, across the degenerate, highly colorful countenance confronting you. The common procedure followed by the utterance of that name is (1) a start of horror (2) a fleeting look of vengeful gloating (3) a guilty shadow of reprehension and (4) about fifty varied crossbreedings and malformed offspring of the aforementioned expressions.

Morton Hulkmore at one time was a fan himself; some said he was the ideal fan. His letters were prompt, pleasant, and quite often contained a sensible suggestion or two. For readers of WEIRD, he had but gentle pity; for HPL fans, a fatherly, not unkind talking-to; for persons afflicted with the desire to write stef, a rather resigned condescession ((that's how you spelled it, pal)), not unmoxed with sympathy. He wrote legibly and with acceptable grammar on a good typewriter, and replaced his ribbon when it began to fade. There was no one who did not have a kind word for him, and vice-versa.

The exact opposite of this paragon of pseudo-scientific devotion was Finian j (No capital, no period) Axlegresse. Finian j wrote caustic, fragementary notes on a battered model '98 Oliver if and when he wrote at all; readers of WEIRD taught their hunch-backed little children to shoot on sight, anything wearing what resembled remotely a maroon sportshirt and harlequin bifocals. Not only did he spit on those who aspired for a career in the pulp field; he dabbled in it himself. He was even so utterly debased and demoralized as to read Howard Phillips Lovecraft, and to claim that "Green Slime over Magnetogersk" was his favorite story.

Yet, so blinding are the ties of fandom, that Morton Hulk-more and Finian j Axlegrease were the best of friends right up to that day in August. On this particular day, the birds sand, flowers bloomed in Pershing Square, and clouds sailed past the Richmond Tower in a perfect California sky. Finian j Axl-

egrease, having arisen at his customary hour, was engaged in making away with his breakfast. The noonday sun shone in upon this revolting scene, and hastily covered its face with a cloud.

Since Axlegrease's method of consuming shredded wheat might have been likened to Gargantua wallowing in a huge vat of tapioca pudding, his glasses were on a shelf a safe distance away from flying fragments and the treasured shirt was covered by a small bib, inscribed "This little duckling eats her catmeal. Do you?"

At this moment, Morton Hulkmore, inspired by a new mission to create good-will among fans, opened the door. "Good morning, Axy", he cried cheerfully. "Good morning, good morning!"

"Splurbp," replied Axlegrease, not uncivilly. "Gfb blp."

"Thanks, I will," said Morton, suiting action to words, by plunking down in an overstuffed sofa.

"Look here, old chum," continued that worthy after a bit, "New mag." Axlegrease's muffled reply sounded like: "Frbfffp?"

"Let me read you the lead story," he continued. Hearing nothing which could be reasonably translated as an objection, he began to read. Axlegrease, loath to interrupt a free service, kept silent as far as was possible. Soon he ceased eating, and listened raptly. As the story developed, the more engrossed became Finian j Axlegrease. For an hour he listened intensely, As Hulkmore read on. When the story was done, Hulkmore fell silent.

Slowly, reverently, Axy rose from his semi-coma, and plunged into his shredded wheat, to hide his emotions. Tears welled in Hulkmore's good-natured eyes, as he saw how deeply his friend was stirred. His pudgy figure leaned over the table, and he patted Axy on the shoulder. "There, there, old man, I know how you feel."

"You don't understand," Axlegrease choked. "I'm a new man! I that science-fiction had gone to pot...I never that I'd read a good yarn again. I...I..." Here he broke down completely. Big salty tears dripped into the breakfast bowl; gusty sobs shook the room. When he finally got ahold of himself, when his sloping shoulders stopped shaking, and he could see clearly again, he blew his nose on the ducklings' feet, and went around the table to Hulkmore, whose eyes were not entirely dry, either.

"My friend, I won't forget you for this," Axlegrease stated, once more the master of his emotions. A suspicious tremblor crept into his voice as he added, "You see before you, a fan rejuvenated...a soul risen from the muck!" Then he paused, a light shining in his face. "Oh, let me-but see the mag that printed such a masterpiece...tne author--I must know him!" (continued bottom next page)

"Well," said Morton Hulkmore modestly, "it was really my idea to get you to listen to this certain story. I've been the inting that this silly feud has been going on too long, and I thought if you heard one of his stories, well..." He paused. An expression of ghastly certainty, of terrible realization was spreading o'er Axlegrease's face. An awful, soul-searing fury transformed this weeping idealist into a terrifying symbol of blasting wrath, Of betrayed, Judased trust.

He towered above Hulkmore, spoke but one word: "Tratior!" Morton cowered. His well-padded figure shriveled in the roaring blaze that flared from Finnina's eyes. Then all went black.

Only the faintest rumor of what actually happened to Morton Hulkmore ever seeped out, but it was enough to sear the souls of all who heard. But, knowing the enormity of his heinous, tho perhaps well-meant sin, there was a consensus of "He asked for it, the utter fool!"

ed sour c**einis**ul kostulite, sdoobar, oot too ket an kestu oorgis spos, oogi bultoog ako ya gaan, ee MY THOTS AND WELCOME TO THEM WAS I SEE BY NORM STORER

In reading the lead novel in a recent SS, and in rereading Stapledon's Odd John, I am strock with a deep question, that arises in both, but not named or brought into the open, as such. It is brought out, in Clarke's Against the Fall of Night, with the unspoken question: "What is Alvin trying to rejuvenate the Empire (or human race) for?" And in Odd John the same question comes to my mind, with John's biting sarcasm, and his critisism of the human race.

What is the human race here for, anyway?

For myself, I see no reason for our present and continued existance. The only reason I ever heard put forward, is the slightly fanatical religious reason: "We are here to glorify God and worship him." That doesn't sound like the benign diety we are taught to believe in. God sounds quite egotistical, in fact. But this is unimportant; religion only enters as a minor factor.

I see no "cosmic purpose" in the human race. In this day and age, self-satisfaction is looked upon, when carried to extremes, as indecent and undesirable. Perhaps, in a million years, it won't be. But in any event, it's certainly

not reasonable. Going on the premise that we were put here by intelligent entity--or that life was started by same--it can't be taken as a reason.

There is a purpose that may serve us for a while, but it isn't the final answer. That goal is to better the lot of our children, and their children. Now we call it simply humanitarianism. After we have reached space, we may call it "the Terran's Burden", after the manner of Kipling's "White Man's Burden." But that isn't the final answer. When we have reached a Utopia for ourselves, what then?

I have a rather ridiculous hope that we may find a race that is far-enough advanced beyond us, to have found the answer. The chances that they would be constructed along the same mental planes as us, is terribly remote. And a race with different thought processes probably couldn't understand our quest. About 99% of the world's population works at keeping themselves alive and happy; the other 1% works for our children and their children. We aren't faced by this problem as a race now, but when we reach our Utopia, we shall be. Until then, I suppose we shall just bungle along as best we can.

So I suggest the main purpose of our race is to try to better our lot, and our childrens lot. We must learn the ultimate answer to our problem from some higher intellect, whether it be a god or another race. That will be a long time in coming. Until it does, and as obscure as the problem may seems to us now, I think our best bet as to a subconscious goal is the betterment of future generations. As I say, the race as a whole won't be faced with this problem for probably millions of years, but a little thinking along that line right now will help.

THE GRIPE DEPARTMENT

Wherin the Mutant winds Assemble

JOE KENNEDY

84 Baker Ave. Dover, N.J.

Dear Lin: Nice ecver on the second SPACY. Well-chosen scene, compentently arawn, neatly shaded. Personally, I'd like to see more stef artwork on this order—it gives the mag a certain atmosphere (no. not exactly the type one detects with one's nose) ((hope not.))

A thoroughly decent issue, with everything well worth printing and nothing especially sensational. Which is a good medium. Query: how come the misseoing of the contents page is sharp and dark, and the rest of the issue very readable but light? ((the

contents page, GOB, and cover were run off on a different mimeo);
ARTWORK: Cockroft pic sufficiently goose-pimple producing. Nice
mimeoing on it. Your sketch for the Tor-Con ad I liked muchly.
That at first glance Rotsler did it.

STORIES AND ARTICLES: Or rather story and article. THE STINKING...er..SHRINKING DEATH had an intriguingly logical idea. And yet on second thot, why wouldn't their bodies stand the weight, when their proportions would still be the same? The ratio of the weight of the flesh to the strength of their bones would still be the same, I'd think. Now, if the bodies had been expanded to a larger sixe ((pardon)) size, the weight of the atmosphere would've crushed 'em. ((you've a point there, JoKe)) Column worth continuing. Norm has a readable style. The article brought back memories. I've never seen KING KONG yet, dash it all!

VERSE: DREAM CITY is fairish. Sic-how do you spell the possessive pronoun as opposed to the contraction for "it is"??? ((ask Sneary)) Mars: your poetry seems to be steadily improving Lin. I liked the ones in Loki too. Mars came close to being a sonnet-most of it's in iambic pentameter, and you used a sonnet scheme-8 lines, break, 6 lines. The Shakespearean sonnet goes A-B-B-A-B-B-A-break-C-D-D-C-E-E as to rime scheme, Y'know. HPL's Fungi from Yuggoth are good models for weird-fantasy sonnets, in my opinion.

Belated congrats on making Merwin's A list--even if he did call it "SFACETEEN" ! Good luck and keep the SPACETEERs rolling.

JoKe

((thanks for the long and interesting letter, Joe))

MARION ZIMMER

R.F.D. #1 East Greenbush, N.Y.

Dear Lin: Donn Brazier's comments that coelenterata reproduce asexually will come as a surprise to the coelenterata. According to my college zoology, coelenterates undergo two life stages: the polyp and the medua. Reproduction is asexual during the polyp stage. However, in either stage, in some varieties, they carry on sexual reproduction, by the formation of temporary gonads from layers of interstitial cells beneath the ectoderm layer. ((keep it clean, Astra, keep it clean; this has to go thru the mails y'know)) These may be male or female, or a single coelenterate may be hermaphroditic. They reproduce by a random sort of fusion of gametes. Brazier shouldn't be so blind to the Facts of Life. Even the lowly paramecia carries on conjugation. No matter how eager he is to prove a writer wrong, he shud remember science is the authority and that Davis probably know whereof he spoke which Donn apparently doesn't.

Kennedy's story was swell, and so was the rest. -- Astra

((thank for the letter, Astra, meaty if not incomphrensible. We shud have paid more attention in high-school zoology !.....))

SAM MOSKOWITZ

446 Jelliff Ave.

Newark 8, N. J. Dear Lin: Enclosed is 25 cents for subscription renewal. Say , didn't I send you 25 cents after the first issue? I think I still had one issue to go. ((so you did, Sam, so you did. Sorry!))

Guerry Brown's review of The Arkham Sampler was interesting, but it read more like a listing of the features than a review. ((we cut Guerry's review considerably))

Best wishes -Sam

J.T. OLIVER

712-32'nd. St. Columbus. Ga.

Dear Lin: Well, I finally got SPACETEER #2. To begin with, the cover wuz nice. U musta used a compass to get the Earth so round. The hand-colored title is nice, but I'll betcha it's a lot of work. ((you sed it, keed)) The article on Arkham Sampler was OK, but you'll never convince me the thing is worth one dalla per.

Norm Storer is simply wonderful. I think you guys are trying to low-rate T.Smith for no reason at all. He's a great writer. Any writer slips up sometimes. I also like his comments re H.P.L. If Merwin had an author like him, he'd have a fit, as the sayin' goes. Merwin is a jerk. He gets mad and blows his top every time somebody doesn't agree with him. ((easy, Jay, easy. He's gonna review this, ya kno))

"The Shrinking Death"---say, Lin, I've been outa school a long time, and haven't read science books since then...BUT, it seems if an object was reduced in size, thus increasing the density, the strength would still be the same, relatively. For instance, an iron box will hold together the same as a wooden one. Right? ((Right!))

Now the Gripe Dept. (Nice title)-Moskowitz, I don't agree with him. Thorne Smith is wonderful. How come you guys read so much of his stuff if you don't like him? Joe Kennedy- how come some writers criticize other writers? Reminds me of that jerk, O.G. Estes criticizing Finlay. Tom Jewett has a good point. U shud print his letter on the front cover from now on.

So Long -JAY

THE THIRD AND LAST

It's a sad moment for any fan publisher when his zine is fosed to fold its tent like an Arab and silently steal away into that Happy Hunting Ground where all good fmz go after earthly existence. FFACY never set Fandom on fire, or had big sub list, or won awards, but since we concieved it, gathered material for it, and by the sweat of our brow brought it into existence, we feel a natural sense of loss, now that this is the final issue.

The reasons for mimeograf. (this ish is being run off professionally...at about twelve smackers...any contributions for the Lin Carter Fund for Bankrupt Spaceteer Editors will be gratefully appreciated) And, also, rising costs of paper, ink, stencils et cetera, are beyond our humble means.

But, considering that SPACETEER only ran for 3 issues, we feel that the amount of good material published has been rather noteworthy. We have published material—that is art, poetry, fiction, articles, departments and reviews by fen like John Cockroft, Astra Zimmer, Joe Kennedy, Guerry Brown, Bill Rotsler, Dale Tarr, Jack Clements, Bill Paxton, John Grossman, Van Coevering, Donn Brazier, and Lin Carter.

SPACETEER #1, dated Aug 47 had fifteen pages, #2 ran for sixteen, and this issue has about twenty two. Forty seperatepieces of material. Four stories, four articles, six poems, nine columns and reviews, and about twenty illustrations. We think thats pretty good.

And before we forget the three are numerable subs that do not expire with this issue. The remainder of your subscription will be refunded to anyone who requests it. and somewhere around here should go our especial thanks to John Cockroft, Joe Kennedy, John Grossman and K-Mar Carlson for various help.

There. Guess that about ties up all the loose ends. This issue was very late, our apologies for it. It couldn't be helped. Thanks again, to everyone who helped in any way in the publishing of SPACY....

Your Humble, Obiedient Servents, Lin Cartor, Editor and Pub.,

Assistants, Bill Paxton, Torry Fitzpatrick and Guorry Brown.
